

EXECUTIVE SUMMARY

Walkdown of the Type #1451 asset found no defects requiring intervention. Display, hinge, keyboard deck, trackpad, left-side port bank, and chassis edge all passed visual inspection. Only cosmetic wear was noted: light dust between keycaps and key shine on high-frequency keys (E, R, T, A, S, D). Recommend a routine compressed-air cleaning of the keyboard deck at the next housekeeping cycle; no service action is otherwise warranted.

PRIORITIZED ACTIONS

1

Blow out keyboard deck with compressed air to clear dust between keycaps.

TARGET: WITHIN 30 DAYS

INFO

2

Log key-shine wear on E/R/T/A/S/D for trending at next inspection.

TARGET: NEXT QUARTERLY INSPECTION

INFO

3

Record palm-rest scratches flanking the trackpad under keyboard-deck checklist.

TARGET: THIS REPORT CYCLE

INFO

4

Wipe speaker grille to remove light surface dust during next cleaning.

TARGET: WITHIN 30 DAYS

INFO

5

Re-verify hinge tension and lid-to-base gap at next scheduled walkdown.

TARGET: NEXT QUARTERLY INSPECTION

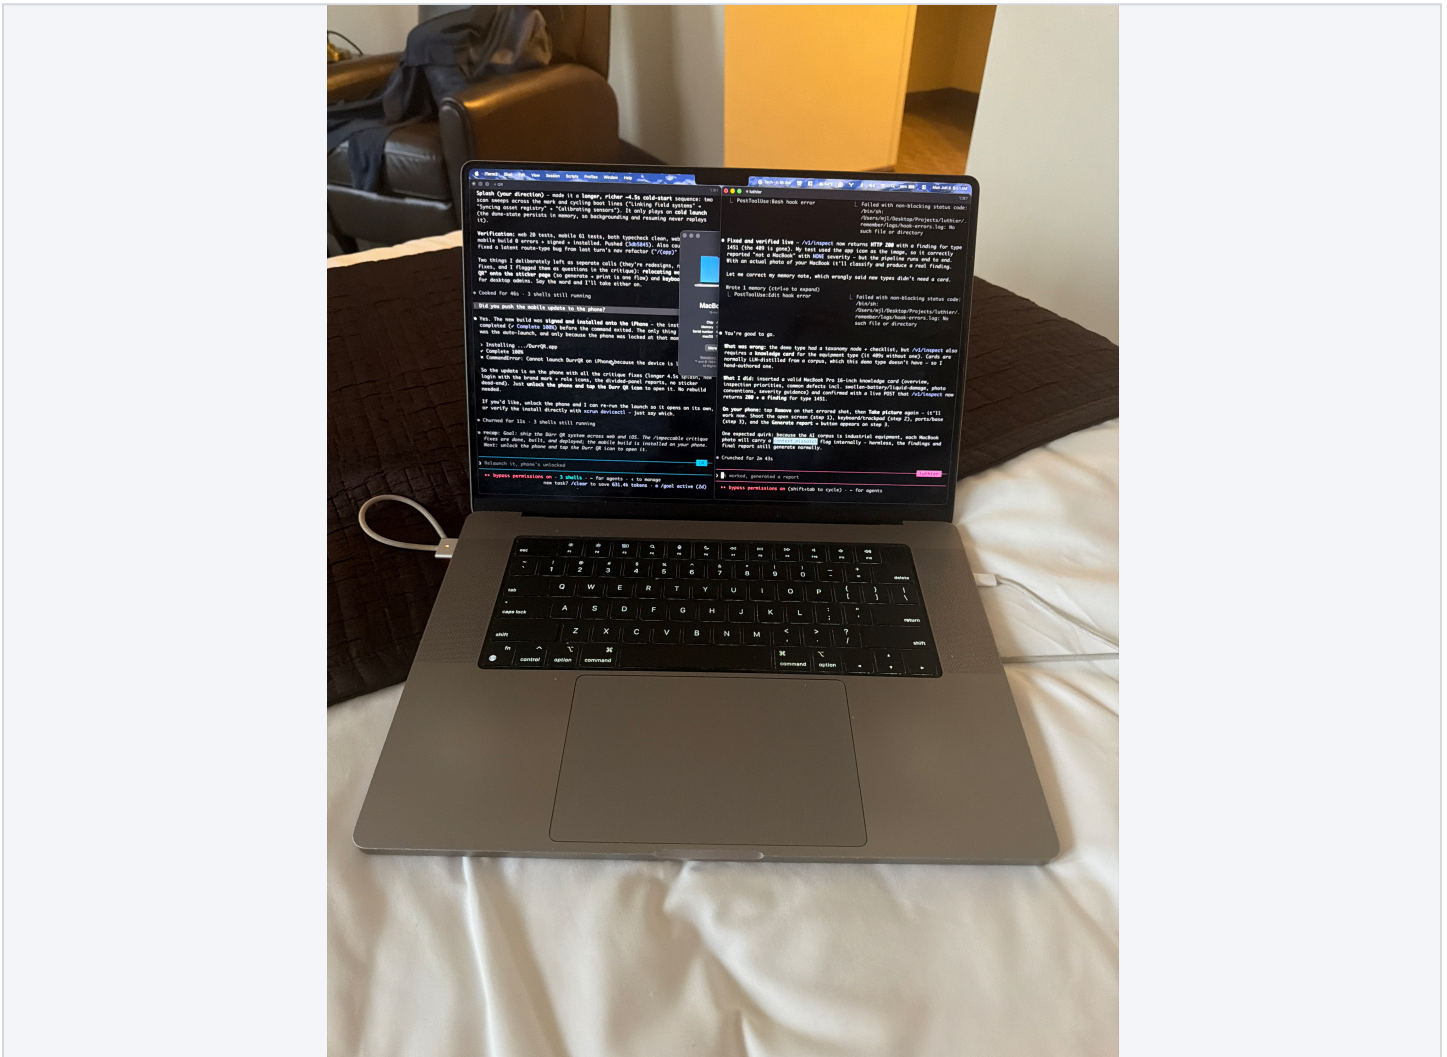

GOOD

FINDINGS

Display panel appears intact with no visible cracks, dead pixels, or backlight bleed; lid is open at a stable angle indicating a functional hinge. Technician notes minor scratches flanking the trackpad, which fall outside this checklist item but the screen and lid themselves look clean.

01

GOOD

- DISCUSSION

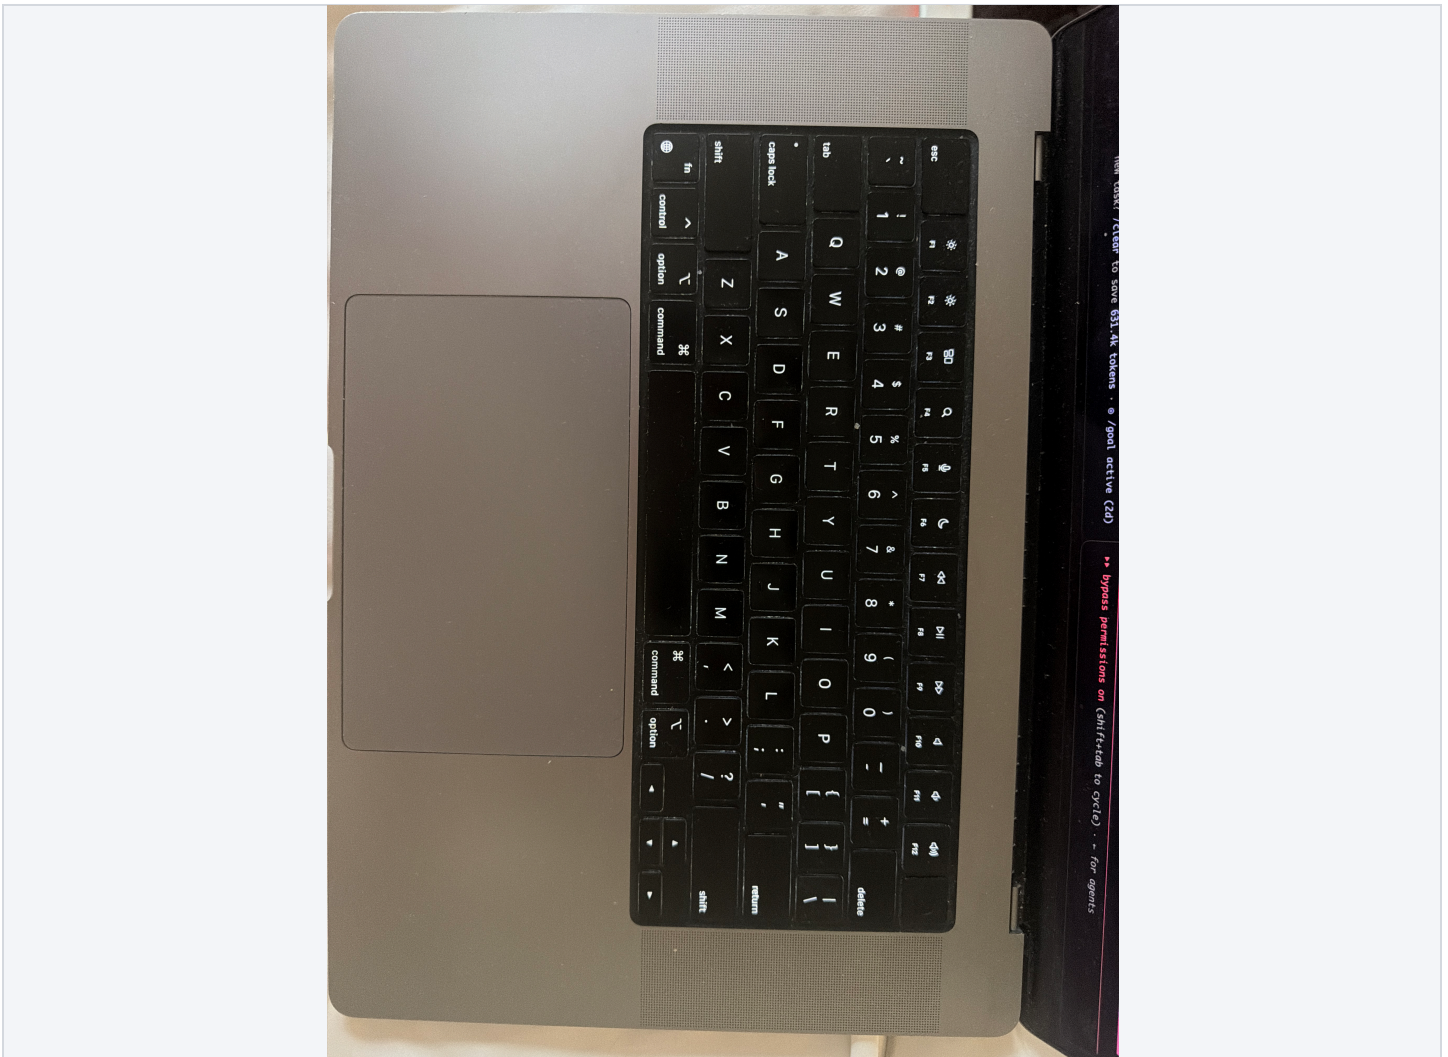

Display panel and lid assembly are in serviceable condition. Screen renders uniformly across both terminal windows with no dead pixels, backlight bleed, or coating delamination, and the hinge holds the lid at roughly 100 degrees without sag. Lid bezel and chassis edges are free of dents or deep scratches.

– RECOMMENDATION

No action required on display or hinge. Capture the trackpad -area scratches noted by the technician under the keyboard-deck checklist for completeness.

02 MacBook Pro 16 - inch keyboard deck shows all keys present with light dust and visible key shine on high - use keys; trackpad appears flat and deck shows no signs of swelling or liquid damage.

● INFO

– DISCUSSION

Keyboard deck is fully populated with all keycaps intact and the trackpad sitting flush — no bulging that would indicate battery swell, and no liquid staining or corrosion on the palm rest. Cosmetic wear is present: light dust and debris between keycaps and visible key shine on the high-use E, R, T, A, S, D cluster, consistent with normal duty cycle.

– RECOMMENDATION

Clean the deck with compressed air at the next housekeeping window. No mechanical service required; trend key - shine progression at the next inspection.

03 Left-side ports and chassis edge appear clean and undamaged. MagSafe, two USB-C/Thunderbolt, and headphone jack show no visible debris, corrosion, or bent contacts; chassis edge is straight with no warping.

● GOOD

– DISCUSSION

Left-side port bank and chassis edge pass inspection. MagSafe contact pads, both USB-C/Thunderbolt openings, and the headphone jack are clean with no debris, bent shielding, or corrosion, and the base seam runs straight with no warping. Speaker grille shows only light surface dust, no clogging.

– RECOMMENDATION

No action required on ports or chassis edge. Include the speaker grille in the next routine wipe-down.
