

EXECUTIVE SUMMARY

MacBook Pro 16-inch walkdown found the unit in fully serviceable condition with no functional defects. Display, keyboard, trackpad, hinge, left-side ports, and speaker grille all pass visual inspection. Only cosmetic items noted: light dust on the deck and keys, and minor scratches on the palm rest flanking the trackpad. Recommend a routine surface cleaning at the user's convenience; no service intervention required.

PRIORITIZED ACTIONS

1

Wipe keyboard deck, keys, and display with approved microfiber cloth to remove dust.

TARGET: WITHIN 30 DAYS

 INFO

2

Log palm rest scratches as cosmetic baseline; no repair action.

TARGET: NEXT QUARTERLY INSPECTION

 INFO

3

Re-verify trackpad remains flush at next inspection to rule out battery swelling.

TARGET: NEXT QUARTERLY INSPECTION

 INFO

4

Confirm MagSafe and Thunderbolt ports remain debris-free during routine checks.

TARGET: NEXT QUARTERLY INSPECTION

 GOOD

FINDINGS

01

Display panel appears intact and powered on with no visible cracks, dead pixels, or coating delamination. Lid is open and holding position normally.

● GOOD

– LEGEND

1 Display Active

Panel renders text cleanly, no cracks visible

2 Left Bezel Edge

No backlight bleed along left edge

3 Right Bezel Edge

Even bezel gap, no coating lift

4 Top Menu Bar

Menu bar pixels uniform, no dead row

– DISCUSSION

Display panel is powered and rendering terminal and IDE content uniformly across the full active area, with no cracks, dead rows, or backlight bleed along either bezel edge. The hinge is holding the lid open at a stable angle without sag, and no anti-reflective coating delamination (staingate) is visible on the inspected surface.

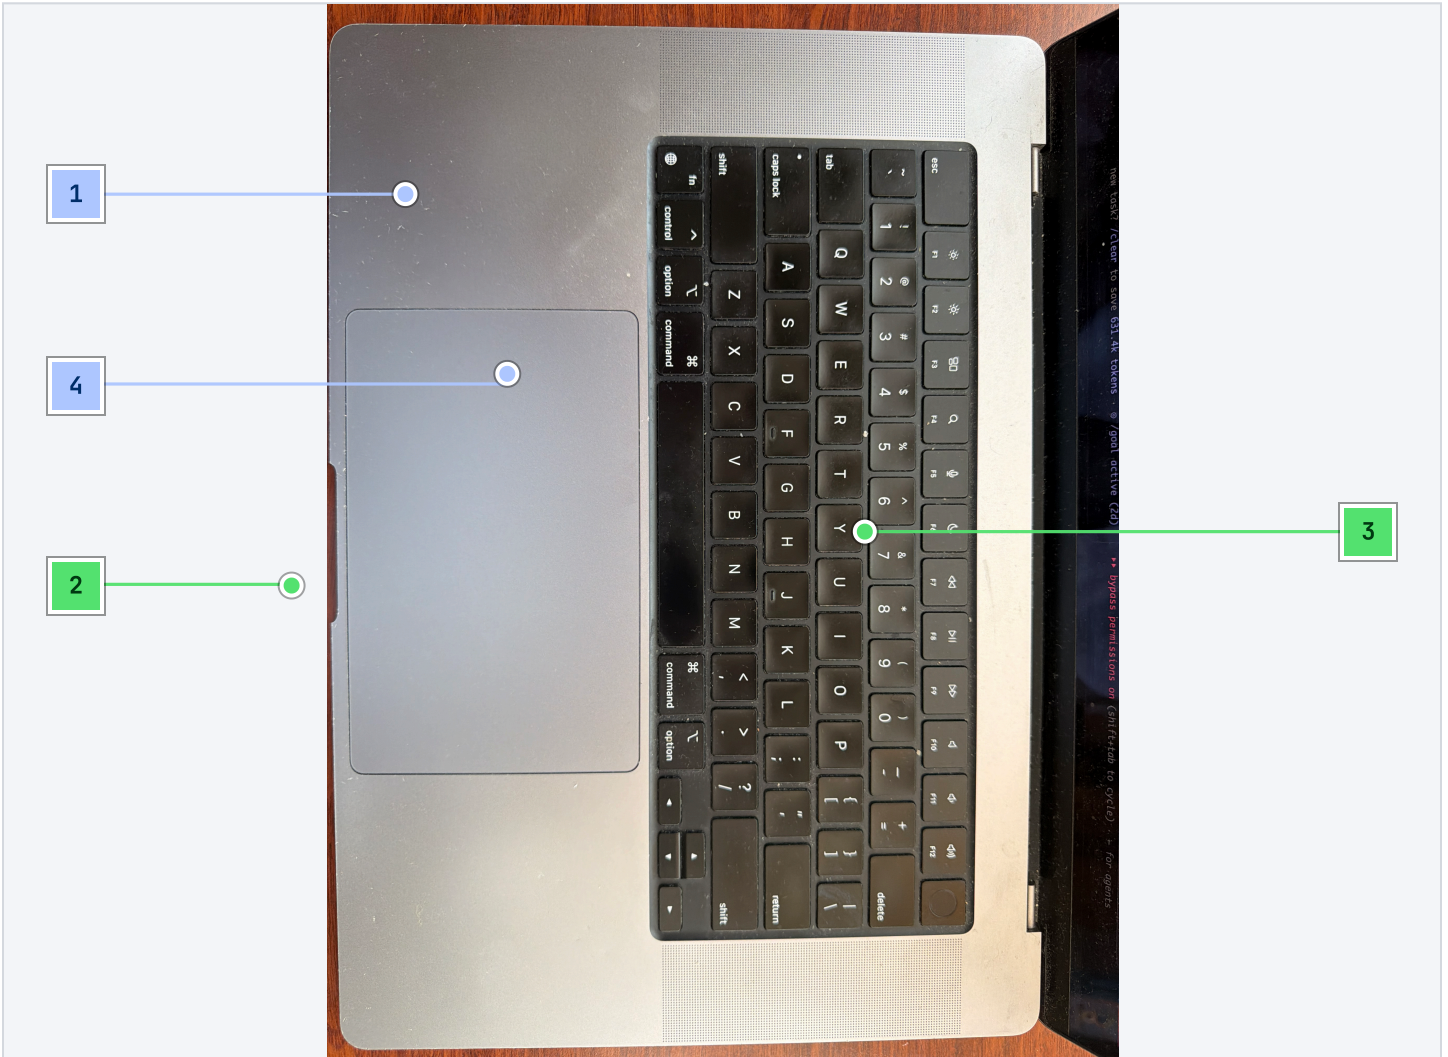

– RECOMMENDATION

No action required. Continue normal use and revisit at the next scheduled inspection.

MacBook Pro 16-inch keyboard deck and trackpad appear intact with all keys present and a flat trackpad. Minor cosmetic scratches are visible on the deck adjacent to the trackpad, along with light dust on keys and palm rest.

02

● INFO

– LEGEND

1 Deck Scratches

Minor cosmetic scratches on palm rest near trackpad

2 Trackpad Flat

Trackpad flush with deck, no swelling lift

3 Keycaps Intact

All keys present, no shine or stickiness

4 Surface Dust

Light dust on keys and deck

– DISCUSSION

All keycaps are present and seated flat, and the trackpad sits flush with the deck — no lift or bulge that would indicate battery swelling underneath. Light dust is present across the keys and palm rest, and minor cosmetic scratches are visible on the deck on both sides of the trackpad; neither affects function.

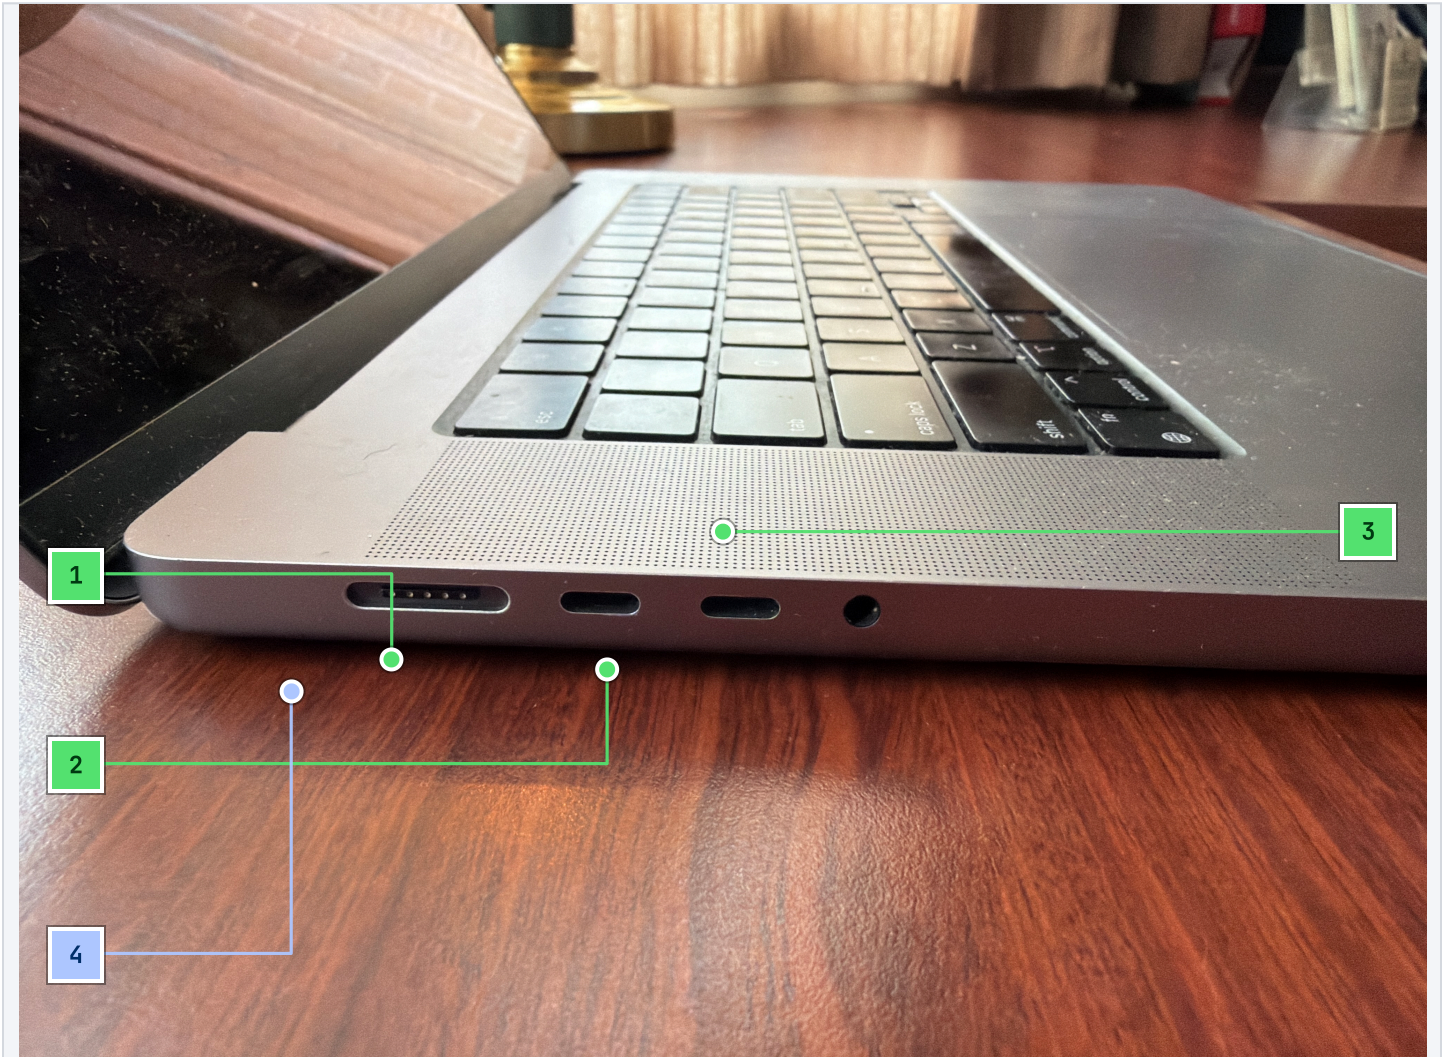

– RECOMMENDATION

Wipe the deck and keys with a microfiber cloth. Record the palm rest scratches as cosmetic baseline and recheck trackpad flushness at the next inspection.

03

Left-side ports (MagSafe, two USB-C/Thunderbolt, headphone jack) and speaker grille appear intact with no visible bent pins, corrosion, or debris. Light dust is visible on the display and keyboard deck, but the chassis sits flat on the table.

● GOOD

– LEGEND

1 MagSafe Port

Contacts clean, no corrosion or bending

2 USB-C Ports

Both Thunderbolt ports clear of debris

3 Speaker Grille

Perforations intact, no dust packing visible

4 Chassis Edge

Base seated flat, no warping observed

– DISCUSSION

The left-side I/O cluster — MagSafe, both USB-C/Thunderbolt ports, and the headphone jack — shows clean contacts with no bent pins, corrosion, or debris packing. The speaker grille perforations are intact and unobstructed, and the chassis base is seated flat against the table with no warping at the edge.

– RECOMMENDATION

No action required on ports or chassis. Include a light dust wipe of the surrounding deck during the cleaning pass already scheduled.
